

## Robotic Process Automation (RPA) Benefits for Business Transactions

### Cost Efficient

Compared to the salary of a full-time employee working remotely, a software robot costs only **a third** of that and only **a fifth** of the cost of an on-site employee.

### No Errors

One of the main benefits of automation is less need for **human involvement**, which leads to fewer errors.

### Top Production

With RPA, you get **enhanced production**, better accuracy, less time spent on continuous training, and a noticeable reduction in cycle times. In other words, RPA offers a better service delivery approach.

### Easy Scaling

RPA **improves scalability** and versatility in business procedures.

### Data ownership

One thing that's not possible with human employees, especially those working remotely, is that **all processes and data** remain on the premises with RPA.

### Optimise Spending

You can save from **25% to 50%** in costs with RPA.

### Always active

RPA tools can be operational **24/7**, or in other words, do the work of **three to five** human employees.
